

AERO MEDICAL EVACUATION (AME)

Iqarus is a world leader in providing comprehensive Aeromedical Evacuation (AME) solutions to clients globally. Our AME capability includes both ground and airborne medical teams who provide expert care in-flight, and on the ground, to designated patient staging platforms. We operate anywhere AME is required to provide support for humanitarian assistance, disaster response and military operations.

At Iqarus, we understand that medical evacuation involves the timely and efficient movement of casualties, with the provision of medical care enroute, to receiving medical facilities, using medically equipped ground vehicles or aircraft. When casualties require immediate relocation to a higher level of care, AME is the optimal choice for rapid and safe evacuation. Our Aeromedical Evacuation Team is comprised of specialist medical personnel with unparalleled expertise in aeromedical transportation, ensuring efficient, safe, and effective missions.

Our medical teams are experts in operating in challenging environments and can provide the right level of care to the patient while in flight. The team consists of a combination of Flight Doctor, Flight Nurse and Flight Paramedic, along with kit and equipment to support the patient and manage any deterioration in their condition.
