- 104,400** Accredited Providers
- 13,000** Employees
- 5,400** Medical Professionals
- 100** Languages spoken

MEDICAL RISK RATING DEFINITIONS

The medical risk ratings are based on a range of health risks and mitigating factors, including but not limited to: COVID-19 complexity of accessing and provisioning healthcare, infectious disease, environmental factors linked to climate change, security risk rating, medical evacuation data, standard of emergency medical services, outpatient and inpatient medical care, access to quality pharmaceutical supplies, and cultural, language or administrative barriers. An overall single rating is given for a location; however, the medical landscape can vary widely. For example, major cities may have better access to quality medical care; whereas remote or rural locations may have limited availability of health facilities and specialist care.

VARIABLE MEDICAL RISK

Significant variation of travel medical risk: Quality medical care, emergency services, and dental care is available from selected providers in major cities, including prescription drugs. Elsewhere: availability of these services may be limited. Similarly, exposure to food, water-borne or potentially life-threatening infectious diseases may vary.

LOW MEDICAL RISK

Quality medical care is available throughout the country. Specialist care, emergency and dental services, and quality prescription drugs are widely available. Low risk of infectious diseases.

HIGH MEDICAL RISK

Basic emergency services, medical and dental care may be available. Specialist care is limited even in major cities. A wide range of quality prescription drugs may not be available. Food and water-borne infections are common. Potentially life-threatening infectious diseases such as malaria, typhoid and cholera may persistently pose a threat.

MEDIUM MEDICAL RISK

Quality medical care is available from selected providers. Reliable emergency services, limited specialist and dental care are usually available. Some risk of food or water-borne diseases. Potentially life-threatening infectious diseases such as malaria and typhoid may be present.

VERY HIGH MEDICAL RISK

Healthcare is almost non-existent or severely overtaxed. There may be very limited or no primary care, emergency care or dental services. Quality prescription drugs are frequently unavailable. Food and water-borne infections are common. Potentially life-threatening infectious diseases such as malaria and cholera may be persistently present and large outbreaks may occur.

INTERNATIONAL SOS ASSISTANCE CENTRE

Staffed by doctors and nurses, security specialists, air and ground logistics personnel and multilingual coordinators, our 27 Assistance Centres deliver 24/7 medical and travel security services in more than 99 languages, all over the world.

CLINIC

An accredited, integrated network of International SOS and partner clinics, practising a supervised international standard of medicine.
